## SILVER GLOSS FOR BLOND HAIR

Learn about the new line of toners Perfect Liss Fusion Color: products developed with nanotechnology-based pigments that offer complete toning and treatment in one single application.

Gloss Fusion Color: developed with a blend of noble pigments, Violet 43 of Italian origin, and the latest generation of actives that promote the neutralization of the yellow and orange pigments and the complete restoration for a perfect blond.

Noble actives, like lactic acid, provide the normalization of the pH and the closing of cuticles for a longer durability of the pigments. D-panthenol, rich in provitamin B5, guarantees ultra-softness and silky touch. Cationic polymers act on the reduction of negative charges, offering protection and durability in-between washing.

### *fusion* Color Gloss

**How to use:** always use gloves. Wash hair beforehand, apply Gloss Fusion Color directly on the strands or, if you prefer, mix in the ratio of 10 grams of white mask to 5g of Gloss Fusion Color to customize the shade. Finish as desired.

Customize your shade by using Gloss Fusion Color, with a mixture of white moisturizing mask, toners and coloring true to the unique blond.

**Lactic Acid:** Provides mass and is a super-moisturizer, to fully restore damaged hair acting as a pH balancer.

**D-Panthenol:** Acts as a moisturizer, rich in pro-vitamin b5, promotes elasticity and resilience, protects against damage, generates intense shine.

**Violet 43:** Technology of Italian origin with a blend of pigments with a high fixation capacity that permeates deep into the fibers, neutralize the tones, eliminates undesired tones and increases color longevity.

For professional use only. We recommend to always perform Patch test for best results.
